

Replacement Coils

Available for ALL
manufacturer's
closed circuit fluid coolers and
evaporative condensers

Coils are designed and built
according PED 2014/68/EU

High Efficiency Coil

EVAPCO's "patented" Thermal-Pak® II coil incorporates an unique elliptical CROSScool tube design. This advanced design results in more circuits per square foot of plan area than any other manufacturers' coil to ensure the best evaporative heat transfer efficiency. Coils are available in galva, SST 304 or SST 316.

Alternative: Ellipti-fin® coil.

All coil rows feature patent pending finned Thermal-Pak® II elliptical tube design to increase evaporative and dry cooling efficiency.

Custom Design

EVAPCO's Thermal-Pak® II coil is guaranteed to fit your evaporative cooling equipment, match the existing piping connections and meet or exceed the original equipment performance.
